

CERCLA Expertise

- Strategic Planning
- Project Management
- Negotiation
- PRP Representation

Remedial Investigation

- Conceptual Site Model Development
- Environmental Media Characterization
- Risk Assessment

Feasibility Studies

- Bioremediation
- Chemical Oxidation
- Nanotechnology
- Natural Attenuation
- Thermal Desorption
- Soil Vapor Extraction / Air Sparging
- Excavation
- Solidification / Stabilization
- Capping
- Permeable Reactive Barriers
- Phytoremediation
- Pump & Treat

Remedial Design/Remedial Action

- Value Engineering Design Review
- Removal Programs
- Bench- & Pilot-Scale Treatability Studies
- Permitting
- Measurement & Payment Provision
- Contractor Procurement
- Construction Management & CQA

O&M

- Maintenance Services
- Soil & Groundwater Management Plan
- Engineering / Institutional Controls

With a track record of success at more than 40 CERCLA sites, many of which are on the National Priority List, Cummings/Riter's involvement has ranged from initial planning of the RI/FS through remedy negotiation and selection, RD/RA, O&M, and post-closure, during which we have developed a thorough understanding of the CERCLA remedial process.

Our staff has been integrally involved at several major CERCLA sites for over 20 years, reaching the second five-year review milestone at a few sites. This level of CERCLA experience is truly a rarity for a consulting firm, and the result is that Cummings/Riter is exceptional at leveraging the positive synergies available throughout the CERCLA remedial process, and developing an empirical approach to problem solving at CERCLA sites.

As recognized CERCLA experts, staff members have provided testimony on Superfund reauthorization before the House Hazardous Materials and Finance Subcommittee, and were appointed to the National Advisory Counsel for Environmental Policy and Technology by former USEPA Administrator Johnson.
