Cummings/Riter offers forensic investigation consulting, litigation support and expert witness testimony to clients that include corporations, potentially responsible parties, legal counsel, insurers and government agencies in federal and state court trials and arbitrations, and we have a track record of securing successful decisions in cost recovery actions.

Our staff includes an interdisciplinary group of engineers, geologists and scientists. Senior staff members were involved in some of the first major environmental remediation projects in the U.S. in the 1970s, and are recognized experts in the areas of regulatory compliance, soil and groundwater investigations, contaminant release mechanisms, hydrogeological issues, and environmental assessments. We apply our expertise to provide compliant, highly cost-effective solutions under challenging circumstances.
